

MAXDATA port replicators

The all-inclusive solution for mobile workstations

Anyone who wants to use a mobile workstation without compromise needs access to the important peripheral connections at all times and without awkward fiddling about with cables.

MAXDATA provides two professional solutions for quickly docking and removing peripherals: The USB port bar is a universal solution that is standard for all MAXDATA ECO series notebooks with USB connection and port replicators as a high end business solution for MAXDATA PRO series notebooks.

Accordingly, in addition to USB interfaces the MAXDATA port replicator provides a connection to the workstation monitor, direct LAN access and simple connection to a network printer. The MAXDATA port replicator offers all the connections with a single cable and a single "click". It could not be easier.

Highlights:

- All common connections for peripherals
- Quick docking and removal with a single "click"
- No space lost at the workstation due to the small size

Application Areas

The MAXDATA port replicators for MAXDATA PRO business notebooks are especially well suited to work in offices and home offices.

MAXDATA recommends Microsoft® Windows® XP Professional for business.
